

Creating a DB With XAMPP

Getting Started:

1. Install XAMPP
2. Make sure MySQL and Apache are running on your local machine
3. Navigate to <http://localhost/index.php>
4. Go to **phpMyAdmin** from the top menu
5. In the left-hand menu, create a new database (+New) and name it
6. In the top menu, select “Import”
7. Then where it says “choose file”, choose the appropriate .sql file and press “import”
8. If all is successful, the DB should now be accessible in the lefthand menu
9. This DB can now be imported into the system with a basic connection script
